Hi Geniece,

Thanks for the clarification on the inventory tables and on Matt. I will let him know today. I hope we will have answers from the pending invitations by next week.

Joanne

Hi Joanne,

We have been able to get a head start on the literature inventories for some of the health effect categories we're planning to hand off to experts. The neurotox section was one of those. We also have some preliminary work done on the hepatic and cardio tox sections. Since we didn't know exactly when experts would be able to start work, we didn't want their sections to lag too far behind the others while we waited. So, our plan is to hand those inventories-in-progress over to the experts as soon as they're onboard. That's what we'd like to be able to do with the neurotox inventory now that Anna is working on it. Laura will be using this opportunity to switch her focus to other parts of the assessment. So, feel free to edit/amend Laura's inventory however you, Anna, and Pam would like. It's just meant to be a foundation to help you get started.

We met with John and decided that we would not be able to pursue Matt Longnecker as an expert author. His situation would be considered a conflict of interest not just because he's consulting for industry but because his planned work for industry is related to PCBs, and the timing of that project and our project would overlap.

Unless there's another expert in line to invite to write the sections that were offered to Matt (I don't think there are), I suggest that we hold off on inviting anyone else for the moment to wait for responses on a few more of the pending invitations. We might want to invite Susan Korrick to do it, but she might be needed for the repro section if Melissa Perry doesn't come through.

Thanks,  
Geniece

Hi Laura and Geniece,

Thanks for sending these documents. This is really great. Laura, it looks like you have already made substantial progress on the neurological tox table. Since you have already taken the lead on this, please let Anna and I know if you wish to continue working with us. Anna and I were devising a plan in which we would pull out the information for a range of different kinds of neuro studies in order to see if we should tweak the table headings. We were then thinking to send a draft to Pamela Lein once all of her paperwork is in place in order for her to finalize the table organization. Originally, Pamela indicated she would not be able to spend much time on the inventory tables/preliminary plan/study protocol in July and August, so we were planning on doing most of the extractions for the neuro table. More recently, she indicated she may be able to spend up to 10hrs/month for these months. Our revised plan is to prepare drafts for these 3 documents for Pamela to review and let Pamela direct us on how to best support her during this time.

Thanks,  
Joanne

Hi Joanne & Anna-

Xabier does have some example tables for MOA inventories (which are attached, developmental effects and MOA inventory files). These are also on the PCB Team onedrive site under "Literature Inventory tools & resources" folder. However, I have also been working on starting a Neurological effects inventory, which is also attached here. My neurological effects inventory does not include as much detail as his MOA example inventory, merely a column noting which studies contain MOA/mechanistic data. I just wanted to send this along so that you all don't duplicate any preliminary work I've already started.

Thanks,  
Laura

Hi Geniece and Laura,

Anna and I are preparing to begin organizing the neuro inventory for Pamela. Would it be possible for you to send me Xabier's example? We want to review how he noted the MOA data.

Thanks,  
Joanne
